

Management SW | Control Center

Integrated System Management SW

Control Center is central monitoring system to monitor, playback, and set up WESP products (WebEye, i-Rec, eDVR, DVrS, WinDVrS, and so on) as a real time, which has developed to verify occurrence (Event, Alarm, Status) visibly.

Key Features

- Manage All WebGate's Products including DVR(4/8/16ch), Network Camera, Video Server, and Recording Server
- Support Dual monitors
- 128ch Simultaneously Live Monitoring
- Max. 1000 Multi-Site Management System
- 1/4/9/13/16/25/36/49/64 Division
- Support Site/View-Set/Map Mode for effective management
- Various Event Notify
- Visible Status Panel
- Support Scheduled Alarm Pop-up
- Alarm History Log Record/Search Function
- Support Sequence Switching
- Audio In/Out, Relay Out Control
- On-Screen PTZ Control
- Instant Recording
- Support Normal and Schedule Backup
- Convenient Text/Smart/Time Search
- Configure All WebGate's Products' All Functions

Control Center Pro : Release on the 3Q of 2006

- Quad/Hexa monitors support (128~256ch Simultaneously Live Monitoring)
- Enhanced Map Mode
 - Section, Sub map, Map link function
 - Instant Playback from the map
- User Export Function
 - Export/Import by the user's own configuration

Dual-Monitors enables on single & dual monitor to work multi-performance surveillance as the first time released on WebGate DVS (Digital Video Surveillance) solution based on WESP (Webgate Embedded Standard Protocol) for upcoming surveillance market.

Map Mode Display video channel, sensor-in and relay-out, which make easy clicking for users to surveillance real-time monitoring and playback at the same time.

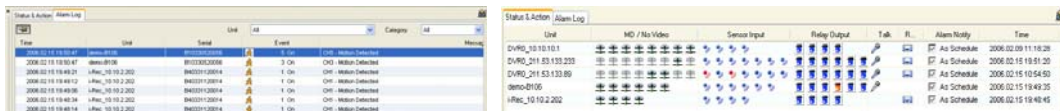

Effective Management for Multiple Unit – View Set, Map

- Monitor several remote sites through the Control Center at the central management server, which makes convenient way to detect all devices installed on the same LAN over WESP.
- Manage the unit to register max. 64 channels as a View Set
- Manage the registration of camera, sensor, relay-out, and audio out over the map
- Display event status over icon of a map and control audio out, relay-out, and etc through the icon

Alarm Management

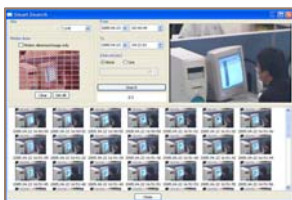

- Display Camera/Sensor Input/Relay Output/Recording of a product with visible status
- Display event list as a real time, which all can be recorded and searched
- Display video image popup detected by a alarm and be enable to schedule the event by a unit whether it will notify to a user

Playback and Backup

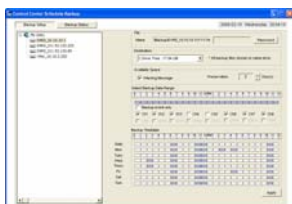

- Connect to recording server or open video files saved on its PC
- Instantly playback video, audio, text, or log history from a recording server
- Various search mode – Calendar, Time-Line, Log, Text, and Object(Smart)
- Simultaneously playback max. 16ch video by time, date, and event
- Zoom in/out or adjust brightness and contrast
- Backup the files from a recording server

Smart Search

Very convenient way of finding recorded data to instantly view at a specific time among large number of files, which save time rather than searching all data files

Text Search

Efficient text search by a date & keyword, which easily accessed to the corresponding time by double-clicking it.

Schedule Backup

Periodic schedule backup the video image from DVR or recording server
